This problem often forms part of the core exercises designed to test understanding of fundamental accounting principles, including journal entries, ledger postings, trial balances, and financial statement preparation. Providing a comprehensive solution not only facilitates learning but also enhances problem-solving skills, ensuring mastery of the material. In this article, we will explore the detailed answer to this problem, breaking down each step for clarity and insight into best practices in accounting.

Understanding the Context of the Problem

Before delving into the solution, it's essential to understand the typical structure of comprehensive problems in the 25th edition of an accounting textbook. These problems usually encompass:

- Recording transactions
- Posting to ledger accounts
- Preparing trial balances
- Adjusting entries
- Preparing financial statements such as Income Statement and Balance Sheet

Comprehensive Problem 2 in this edition likely involves a scenario with multiple transactions over a period, requiring the application of various accounting principles to produce accurate financial reports.

Step 1: Analyzing the Given Data

The first step in solving the problem is to carefully review all the provided data. This often includes:

- List of transactions with dates and amounts
- Opening balances of accounts
- Additional notes or instructions, such as adjustments or corrections

Example Data (Hypothetical):

Date	Transaction Description	Debit (\$)	Credit (\$)
Jan 1	Owner invests cash into business	10,000	
Jan 3	Purchased supplies on account		2,000
Jan 5	Paid rent for the month	1,000	
Jan 10			
Jan 15	Paid wages to employees	5,000	
Jan 20	Purchased equipment with cash		3,000

Step 2: Recording Transactions in Journal Entries

The next step involves translating these

transactions into journal entries, which are the foundation of accurate accounting records. Example Journal Entries: Owner Investment Debit Cash \$10,000 Credit Owner's Capital \$10,000 Purchase of Supplies on Account Debit Supplies \$2,000 Credit Accounts Payable \$2,000 Payment of Rent Debit Rent Expense \$1,000 Credit Cash \$1,000 Sales for Cash Debit Cash \$5,000 Credit Sales Revenue \$5,000 Wages Payment Debit Wages Expense \$1,200 Credit Cash \$1,200 Purchase of Equipment Debit Equipment \$3,000 Credit Cash \$3,000

Step 3: Posting to Ledger Accounts

Once journal entries are recorded, the next step is to post them into the respective ledger accounts. This process helps in tracking the balances of individual accounts. Sample Ledger Accounts:

Cash Account Jan 1: Debit \$10,000 Jan 5: Credit \$1,000 Jan 10: Debit \$5,000 Jan 20: Credit \$3,000

Supplies Account Jan 3: Debit \$2,000 Accounts Payable Jan 3: Credit \$2,000

Owner's Capital Jan 1: Credit \$10,000

Rent Expense Jan 5: Debit \$1,000

Sales Revenue Jan 10: Credit \$5,000

Wages Expense Jan 15: Debit \$1,200

Equipment Jan 20: Debit \$3,000

Step 4: Preparing the Trial Balance

After posting, compile all account balances to prepare an unadjusted trial balance. This ensures that total debits equal total credits, confirming that the ledger is balanced. Example Trial Balance:

Account	Debit (\$)	Credit (\$)
Cash	11,000	
Supplies		2,000
Equipment		3,000
Accounts Payable		2,000
Owner's Capital		10,000
Rent Expense	1,000	
Wages Expense		1,200
Sales Revenue		5,000
Total	19,400	17,000

Note: The trial balance shows a discrepancy here, indicating the need for further adjustments or corrections, which is typical in comprehensive problems.

Step 5: Making Adjusting Entries

Adjusting entries are necessary to account for accrued or deferred items. For example, if there are supplies used or accrued expenses, they need adjustments.

Common Adjustments:

- Supplies used during the period
- Depreciation of equipment
- Accrued wages or revenues

Sample Adjustment: Supplies used: 500

Adjusting Entry: Debit Supplies Expense \$500 Credit Supplies \$500

Step 6: Preparing Adjusted Trial Balance

Incorporate adjustments into the trial balance, updating account balances accordingly. After adjustments:

Account	Debit (\$)	Credit (\$)
Cash	11,000	
Supplies		1,500
Equipment		3,000
Supplies Expense	500	
Accounts Payable		2,000
Owner's Capital		10,000
Rent Expense	1,000	
Wages Expense		1,200
Wages Payable (if any)		
Sales Revenue		5,000

Total debits and credits should now balance.

Step 7: Preparing Financial Statements

Using the adjusted trial balance, proceed to prepare financial statements.

Income Statement:

Revenues: Sales Revenue: \$5,000

Expenses: Rent Expense: \$1,000 Wages Expense: \$1,200 Supplies Expense: \$500

Net Income: $\$5,000 - (\$1,000 + \$1,200 + \$500) = \$2,300$

Balance Sheet:

Assets: Cash: \$11,000 Supplies: \$1,500 Equipment: \$3,000

Liabilities: Accounts Payable: \$2,000

Owner's Equity: Owner's Capital: \$10,000 Add: Net Income: \$2,300 Less: Withdrawals (if any, not specified here)

Final Step: Review and Confirm Accuracy

The last step involves reviewing all entries, calculations, and statements to ensure accuracy and completeness. This includes:

- Cross-checking journal entries and ledger postings
- Ensuring trial balance totals match
- Verifying calculations on financial statements
- Confirming compliance with accounting standards

It provides a series of transactions, adjustments, and additional data that require careful analysis and application of

accounting principles. Dissecting the Problem Components The problem is typically divided into several parts, each building upon the previous: Recording Transactions The initial section involves journalizing a series of transactions, such as sales, purchases, expenses, and other financial activities. Accurate recording here sets the foundation for subsequent steps. Posting to Ledger Accounts Once transactions are journalized, they are posted to the respective ledger accounts. This step ensures that all account balances are up-to-date. Adjustments and Trial Balance Adjusting entries are made for accrued expenses, depreciation, and prepaid items. These are essential to ensure that financial statements reflect the true financial position. Preparation of Financial Statements Using the adjusted trial balance, the income statement, balance sheet, and cash flow statement are prepared. Financial Ratio Analysis Finally, ratios such as current ratio, debt-to-equity, and profit margins are calculated and analyzed for insights into the company's performance.

Step-by-Step Breakdown of the Solution To ensure clarity, the solution to Problem 2 is broken down into detailed steps, with explanations for each.

Step 1: Recording Transactions

Key Transactions: Sale of goods worth \$50,000 on credit Purchase of inventory for \$20,000 cash Payment of salaries totaling \$5,000 Incurring utility expenses of \$1,200 on account Borrowing \$10,000 from the bank Each of these is journalized with proper debits and credits, ensuring adherence to double-entry accounting principles.

Example: Sale of goods on credit:

Date	Account Titles	Debit	Credit
MM/DD	Accounts Receivable	\$50,000	
	Sales Revenue		\$50,000

This entry increases assets (accounts receivable) and recognizes revenue.

Step 2: Posting to Ledger Accounts All journal entries are posted to relevant ledger accounts: Accounts Receivable Sales Revenue Inventory Cash Salaries Expense Utilities Expense Notes Payable This process involves transferring the journal entries into ledger T-accounts, maintaining proper balances.

Step 3: Making Adjusting Entries Adjustments are crucial for accuracy. Common adjustments include: Accrued Expenses: Salaries incurred but not paid (\$1,000) Prepaid Expenses: Insurance paid in advance, with \$500 of expense recognized Depreciation: Equipment depreciated at \$2,000 annually Unearned Revenue: Revenue received but not yet earned, totaling \$3,000

Sample Adjusting Entry for Depreciation:

Date	Account Titles	Debit	Credit
MM/DD	Depreciation Expense	\$2,000	
	Accumulated Depreciation		\$2,000

Step 4: Preparing the Adjusted Trial Balance After posting all adjustments, an adjusted trial balance is prepared. This involves listing all account balances in order to verify that total debits equal total credits.

Sample Data:

Account	Debit	Credit
Cash	\$15,000	
Accounts Receivable	\$20,000	
Inventory	\$10,000	
Equipment	\$50,000	
Accumulated Depreciation		\$2,000
Accounts Payable		\$4,000
Notes Payable		\$10,000
Sales Revenue		\$50,000
Salaries Expense	\$6,000	
Utilities Expense	\$1,200	
...	...	...

Step 5: Financial Statement Preparation Using the trial balance, the income statement and balance sheet are prepared.

Income Statement Highlights: Total Revenues: \$50,000 Total Expenses: Salaries (\$6,000), Utilities (\$1,200), Depreciation (\$2,000), etc. Net Income: Calculated as Revenues minus Expenses

Balance Sheet Highlights: Assets: Cash, Accounts Receivable, Inventory, Equipment minus Accumulated Depreciation Liabilities: Accounts Payable, Notes Payable Equity: Owner's Capital + Retained Earnings

Step 6: Ratio Analysis and Interpretation Finally, key financial ratios are

computed: Current Ratio: $\text{Current Assets} / \text{Current Liabilities}$ Debt-to-Equity Ratio: $\text{Total Liabilities} / \text{Shareholders' Equity}$ Profit Margin: $\text{Net Income} / \text{Sales}$ These ratios help assess liquidity, leverage, and profitability, offering insights into the company's financial health.
